

## Appendix 3

### Accomplishments

The Custer County – Idaho Wildland/Urban Interface Fire Mitigation Plan was completed in 2004 and has been reviewed and updated as required.

Mackay and Stanley – New Fire Stations.

Landslide prone areas of the County have been mapped.

The Custer County - Idaho Wildland/Urban Interface Fire Mitigation Plan has been placed on the County web site.

MOU developed with EMS in the County.

Installation of two static water supply tanks. Still more needed.

South Custer and Mackay procured two new engines.

Numerous trainings and Inter-group training accomplished and more are planned.

Revegetation of some burned areas has occurred and more is planned.

Mackay and South Custer combined fire departments.

Red Tree Project in and around Stanley is completed with hundreds of acres of dead trees removed.

The Salmon-Challis National Forest (SCF) has thinned 307 acres along the road and private land in Challis Creek (municipal watershed for Challis) and prescribe burned another 600 acres in the watershed. Fifteen acres of timber has been sold in Challis creek.

Northeast of Lower Stanley, 300 acres of dead lodgepole pine have been removed with a timber sale and the resulting slash has been treated. Six hundred acres of prescribed burning has been accomplished in this area to lessen the chance of a crown fire moving through the area.

Prescribe burning has occurred northwest of Challis in the Eddy basin drainage to begin reducing fuel loadings across 2,600 acres. More prescribed burning is planned in this area.

Seven thousand acres have been treated with prescribed fire in the Taylor and East Pass drainages since the Fire Mitigation Plan has been established.

Nine thousand acres have been treated with prescribe burning north of Stanley between Sunbeam and Cape Horn over the last seven years to introduce fire back into a fire dependant ecosystem and reduce fuels and ladder fuels.

Timber sales have been set up and some sold in the cape Horn area and harden Creek to remove dead and dying trees, across 1,300 acres.

Thinning and understory ladder-fuel removal is complete on 250 acres surrounding the Camp Bradley Boy Scout camp and a timber sale has been sold to continue thinning the dense overstory of dead and dying lodgepole pine.

One thousand fifty acres of prescribed burning was accomplished in Cherry Creek to change stand structure in another fire dependent habitat south west of Mackay.

Seven miles of Salmon River Electric Coop transmission line were extensively cleared in 2008.

A burning ordinance was passed in North Custer.

Submitted an - All Hazard – Grant for fuels reduction near Sunbeam Powerline.

Built an addition to the Leslie fire station.

South Custer acquired additional PPE.
